ABSTRACTED-PUB-NO: JP2001315916A

BASIC-ABSTRACT:

NOVELTY - The delivery system prints the delivery information corresponding to a generated identification key to a delivery label, and publishes the delivery label. The identification key is generated based on the delivery information input into a personal terminal (11) and received by a delivery company (30) through the internet (50).

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a delivery method.

USE - Used for shipping delivery loads by parcel delivery service.

ADVANTAGE - Eliminates the necessity for the forwarder of the load to write the delivery information in a delivery label by handwriting at the time of dispatching the load. Simplifies management of the load delivery operation.

DESCRIPTION OF DRAWING(S) - The figure shows the explanatory diagram of the delivery system.

Personal terminal 11

Delivery company 30

Internet 50
